Portfolio: aaroncheung.me — interactive terminal-style site with live, playable demos of the projects below

EDUCATION

B.S. Computer Science | University of Texas at Dallas

Jan 2023 – Dec 2025

A.S. | Collin College (Magna Cum Laude)

Aug 2022 – May 2025

EXPERIENCE

Capstone Full-Stack Developer – The Review Mediator

Plano, TX | Fall 2025

Collaborated with a team of 6 developers to build a full-stack review management platform that enables businesses to track and dispute Google and Yelp reviews from a centralized dashboard.

- **Responsive front-end:** Built UI with React, Tailwind CSS, and Flowbite with a focus on UX and responsive design, including a full-stack contact form connected through Express middleware to a Supabase backend.
- **Role-based routing:** Implemented dynamic page access using Clerk session tokens to restrict routes by user role.
- **JWT authorization:** Validated JSON Web Tokens in Express middleware to protect sensitive business review data.
- **Row-level security:** Applied Supabase RLS policies to ensure users can only access and modify their own businesses' data.

PORTFOLIO & PROJECTS

Personal Portfolio – aaroncheung.me

HTML | CSS | JavaScript

Designed and built a terminal/TUI-style portfolio entirely from scratch — zero frameworks, templates, or dependencies. Features JSON-driven content rendering, a fuzzy-search command palette, full keyboard navigation, and a persisted theming system (dark/light modes, color palettes, font switching, CRT effect, reduced-motion accessibility support). The site hosts live, in-browser demos of the projects below. Every visual element hand-designed, drawing on my graphic design and digital art background.

Bitboard Game AI – Jumpy (*playable at aaroncheung.me*)

C++ | JavaScript | Heuristic Evaluation

Built a game AI for a 1x8 strategy board game using bitboards — the full game state packed into a single 16-bit integer — with bitwise move generation and iterative deepening search. Ported the engine from C++ to JavaScript for a playable in-browser demo, including a “watch it think” mode that visualizes the search live.

Cursor Activity Heatmap (*live demo at aaroncheung.me*)

JavaScript | Node.js | Python

Implemented an end-to-end system that tracks cursor movement, pauses, and clicks, and renders them as a real-time heatmap overlay — additive intensity accumulated on a hidden canvas and remapped through a color gradient at several redraws per second.

Relational Database System (*15 queries runnable live at aaroncheung.me*)

MySQL | Schema Design | PHP

Designed and implemented a relational database modeling product manufacturing, part procurement, and workforce data; deployed with a PHP API so complex joins, aggregations, and insert/delete operations run live from the browser.

Twitter / X Artwork Automation

Python | Selenium | OpenAI API | HTML

Automated daily sharing of digital artwork on Twitter / X — a queue-driven bot that decides between posting new art and resurfacing older pieces, using full browser automation to handle login, dynamic content, and posting flows.

SKILLS

Languages: JavaScript, TypeScript, Python, C, C++, Java, SQL, HTML, CSS

Frameworks & Libraries: React, Tailwind CSS, Flowbite, Express.js, Node.js

Tools & Platforms: Supabase, Clerk, Railway, MySQL, Git, Selenium, Bash, Jira

Design: Figma, UI/UX Design, Photoshop, Krita
